Paulo Roberto de Almeida Gomes

Full Stack Software Developer

Gama/DF, Brazil | (61) 99224-0386 | devpaulorag@gmail.com
Portfolio: https://www.devpaulorag.com.br/
GitHub: https://github.com/paulorag

Professional Summary

Full Stack Developer with a strong focus on Back-End architecture and business rules. I build robust APIs (Node.js, Java 21, and Spring Boot 3) and have solid practical experience in structuring complex data flows and optimizing queries in relational databases (Oracle/PostgreSQL). I autonomously manage the full development lifecycle, integrating server-side data processing with dynamic, responsive front-end interfaces (Next.js 15 and React). My background handling Mission-Critical Operations (NOC) and strict SLAs ensures a mature approach focused on clean code, infrastructure resilience, and end-to-end application stability.

Technical Skills

- **Back-End & Databases:** Java 21, Spring Boot 3, Node.js, RESTful API Construction & Consumption, SQL (Oracle/PostgreSQL), Query Tuning, Data Architecture.
- **Front-End & Core Web:** Next.js 15, React.js, TypeScript, JavaScript (ES6+), SvelteKit, HTML5, CSS3, Tailwind CSS.
- **DevOps, Architecture & Quality:** Docker, CI/CD, Automated Testing (TDD, Jest, JUnit, Mockito), Git/GitHub, Agile Methodologies (Scrum/Kanban).

Professional Experience

Full Stack Developer | Independent Projects & SaaS Products (Feb 2022 - Present)

- Architected and developed robust, scalable RESTful APIs using Node.js (Express) and Java (Spring Boot) ecosystems, implementing complex business logic such as coupon engines, web scraping, and asynchronous processing.
- Designed and engineered modern web applications and administrative dashboards using Next.js, React, and SvelteKit, ensuring high usability through componentization, complex state management, and responsive design (Tailwind CSS).
- Executed data modeling and query optimization in relational databases (PostgreSQL) using ORMs (Prisma) to ensure application performance and data integrity.
- Implemented environment standardization via Docker containerization and structured application security by building robust authentication flows (JWT) and route protection.

Developer Analyst (Systems Consultant) | NOXTEC (Aug 2024 - Present)

- Developed automations and dynamic documents, applying programming logic to translate business requirements into complex conditional flows, triggers, and integrations (e.g., barcode generation for patient traceability).
- Optimized the performance of critical database queries, reducing report processing time by up to 80% through query refactoring and the implementation of CTEs (Common Table Expressions) in Oracle SQL.
- Structured tabular reports for quality indicators and hospital censuses, utilizing aggregations, date manipulation, and conditional logic to calculate consolidated clinical KPIs (occupancy rates, average length of stay, and nutritional risks).
- Debugged web application errors by inspecting network traffic via DevTools (Network tab), analyzing failed requests, Headers, Previews, and Responses to trace the exact source of errors and provide precise technical diagnostics to vendors.
- Led the on-site system deployment, performing data integrity validations (cross-referencing front-end with the database) and safely manipulating production records (DML) to ensure operational stability.

IT Operations Analyst (NOC) | Vert Integradora de TI (Jan 2023 - Aug 2024)

- Monitored a high-availability hospital ecosystem, analyzing telemetry, identifying bottlenecks, and performing agile incident mitigation using Datadog, Grafana, and Zabbix.
- Investigated infrastructure and network anomalies, conducting technical problem mapping and log analysis to escalate structured resolutions to engineering teams (L2/L3).
- Led Root Cause Analysis (RCA) for complex systemic incidents, orchestrating multidisciplinary tests and creating technical documentation for continuous improvement.

Academic Background

- Bachelor's in Software Engineering | Estácio (Expected completion: Dec 2027)
- Postgraduate Certificate in Software Engineering | Estácio (Completed: Dec 2025)
- Associate Degree in Systems Analysis and Development | Estácio (Completed: Jan 2025)
- IT Technician | Escola Técnica de Brasília (Completed: Feb 2020)

Complementary Courses

curso.dev Training: Software Engineering & Full Stack (81h) | Filipe Deschamps (2026)

- Focus on engineering fundamentals, architecture, Next.js, Node.js, PostgreSQL, Docker, CI/CD, and Automated Testing (TDD).

Oracle Next Education (ONE) (290h) | Alura & Oracle (Jan. 2023)

- Intensive program focused on programming logic, Java ecosystem, Object-Oriented Programming, and Web development.

Front-End Development Fundamentals (220h) | Faculdade Descomplica (Jan 2023)

- Specialization in modern interface structuring and web development.

Front-End Developer (200h) | SENAI/DF (Aug 2022)

- Practical focus on Programming Logic, JavaScript, HTML5, CSS3, Bootstrap, and DOM manipulation

Languages

- Portuguese: Native
- English: Intermediate (Focus on technical reading and professional writing).
